

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph at page 10, line 23 - page 11, line 6 (paragraph [0049]) with the following replacement paragraph:

Replacement Paragraph

[0049] Receiving device 204 receives the transmission from transmitter 26 with a receiver 208. Receiving device 204 further includes a central processing unit 210, a memory 206 and a feedback device 212. Central processing unit 210 has a connection to each of receiver 208, memory 206 and feedback device 212. Memory 206 is configured to store at least one definition based on which a predefined set of pieces of activity information is selected from the received activity information from measurement device 20. Central processing unit 210 is configured to select (at 222) the predefined set of pieces of activity information from the received activity information based on the at least one definition stored on memory 206. Central processing unit 210 may in one embodiment also calculate at least one additional piece of activity information based on the at least one selected activity information. Such calculated values may include e.g. speed (calculated based on altitude and position information), pitch angle (calculated based on altitude and position information) etc.
